SUMMARY

Backend-focused software engineer with practical experience in penetration testing to build secure, high-performance web services, alongside integrating AI agents for development efficiency. Possesses a solid foundation in API integrations, data structures, and containerized deployment environments. Passionate about tackling complex system bottlenecks and web application security challenges.

EDUCATION

BINUS University

Bachelor degree in Computer Science

Bandung, West Java

2024 – 2028

EXPERIENCE

Secretary at MT Al-Khawarizmi BINUS Bandung

January 2026 – January 2027

BINUS University

Bandung, West Java

- Structured and maintained centralized archives for proposals, accountability reports, and event documentation to ensure seamless administrative tracking across student activities.
- Documented detailed Minutes of Meeting (MoM) for all regional meetings, capturing key discussion points, member attendance, and actionable follow-ups.
- Managed participant registration and event attendance systems, collaborating with internal divisions to maintain accurate member databases.

PROJECTS

Deepfake Detection System | *Python, YOLOv8*

June 2026

- Conducted a comparative analysis of object detection algorithms to identify manipulated media and deepfakes.
- Trained and deployed a computer vision model utilizing YOLOv8, hosted as a web application on Hugging Face Spaces.

Sensei's Desk (Personal Blog) | *Laravel 12, React, Inertia.js, Tailwind CSS*

January 2026

- Engineered a custom personal blogging platform featuring a distinct Blue Archive-inspired visual theme.
- Built a responsive single-page application (SPA) utilizing Laravel 12 for the backend and React with Inertia.js.

Weather Information Web App | *Vue.js, Laravel, Inertia.js*

June 2026

- Developed a full-stack web application to fetch and display real-time weather information.
- Integrated backend logic with Laravel and built reactive frontend components seamlessly using Vue.js and Inertia.js.
- Integrated BMKG API into Laravel application logic to process a complex data into optimized JSON endpoints and display real-time weather data updates

E-Commerce Go | *Go*

September 2026

- Engineered a modular Go REST API structured with core handler-service-repository patterns.
- Implemented JWT authentication, bcrypt hashing, and transaction-safe SQLite queries.
- Developed a checkout pipeline integrating order state management, payment mocking, and HTML invoicing.

Lux AI Discord Bot | *Python, Gemini API*

June 2025

- Created an interactive Discord bot capable of answering user queries and facilitating server engagement.
- Integrated the Gemini API to provide intelligent, context-aware conversational responses leveraging NLP.

TECHNICAL SKILLS

Techstacks

- Python, PHP, JavaScript, Go, C, Laravel, Node.js

Developer Tools

- GitHub Desktop, VS Code, Antigravity, GitHub Copilot
